

Hard facts about hard water

Protect your investment and
save money with
quality water systems
for your home

Experience the difference
quality water can make
in your life.

Water treatment system

A quality water system installed where the water enters the home removes all those undesirable minerals before they have a chance to cause problems. The system is designed to do the job with great efficiency – year after year.

- "Smart technology" electronic controller can learn usage pattern for increased efficiency
- System is very easy to program and operation is a breeze
- Valve design is industry proven and built tough for extended service
- Safe 12-volt operation

Drinking water system

Many substances in nature may be undesirable in your drinking water. Whatever your home's water source – municipal water or well water – you can enjoy the benefits of a drinking water system. Installing a drinking water system will provide

your family with high quality water right at your tap. Reverse osmosis and filtration systems provide the best technology to reduce waterborne impurities* – at less cost and less inconvenience than buying bottled water.

- Continuous flow – no storage tank necessary
- Operates on water pressure only – no electricity required for most applications
- Compact design – fits easily under sink
- Attractive, high-flow faucet

*For specific reduction levels please refer to the performance data sheet available through your dealer.

What's the harm in hard water?

Hard water harms nearly every item in your home, leaving mineral deposits and scale build-up on everything your water touches. Hard water is especially tough on plumbing and on water-using appliances, resulting in more repairs and more frequent replacement – and costing Americans billions of dollars a year.

The consequences of hard water in the home:

- Pipes become clogged with scale, reducing water flow
- Water heaters scaled with mineral deposits require significantly more energy to heat your water
- Rust stains on sinks
- Faucets crusted with hard-to-remove deposits
- Towels and clothes are dingy and rough
- Glassware and dishes marred by spots and cloudiness
- Increased expenses for detergent and other cleaning products
- More time and effort devoted to cleaning

Enjoy the advantages of treated water:

- Extend the life of your water heater, fixtures, dishwashers, and laundry equipment by years
- Cut spending on detergents and other cleaning supplies – by as much as half
- Increased water heater efficiency
- Clothes are cleaner, softer, and last longer
- Dishes and glassware will sparkle
- Eliminate the inconvenience and expense of bottled water
- Clean, healthier drinking water
- Better flavor in coffee, soups and ice cubes
- Great lather with less soap and shampoo
- Everything – hair, towels, fruit – rinses cleaner
- Improved water flow through cleaner pipes
